# FRAME & FORM

## Creative Showcase Website — Project Report

A clean, responsive photography gallery that practices HTML structure, CSS layout, hover effects, and mobile-first design.

## Project Overview

Frame & Form is a creative showcase website built with HTML, CSS, and a small amount of JavaScript. It presents a curated set of photos in a responsive gallery, with category filters, hover effects, navigation, and a contact form. The design practices concepts covered in the referenced HTML & CSS course.

## Objectives

- Build a structured webpage using semantic HTML sections and links.
- Use CSS typography, colors, spacing, image sizing, and hover effects.
- Create a responsive gallery using CSS Grid and Flexbox.
- Add simple interactive category filtering and mobile navigation.
- Handle a form submission and save a demo message using localStorage.

## Technologies Used

**HTML5:** semantic sections, links, images, navigation, and contact form.
**CSS3:** responsive layouts, Grid, Flexbox, typography, transitions, and hover states.
**JavaScript:** mobile navigation toggle, gallery category filtering, and form handling.
**localStorage:** stores contact messages in the current browser for demonstration.

## Main Features

- Hero section with introduction and featured photo.
- Six-image gallery with captions and hover zoom effects.
- Category filters for Nature, Architecture, and Little Details.
- Clicking a gallery image opens a larger image in a new tab.
- About and contact sections with form validation.
- Responsive navigation and layouts for desktop, tablet, and mobile.

## How to Run

1. Download and extract the project ZIP.
2. Open the **CreativeShowcase_HTML_CSS_Project** folder.

3. Double-click **index.html** to open it in a modern browser.
4. Test the gallery filters, mobile navigation, and contact form. No installation or backend is required.

## Project Structure

CreativeShowcase_HTML_CSS_Project/
■■■ index.html
■■■ style.css
■■■ script.js
■■■ README.md

## Limitations and Future Scope

The project uses external image URLs and Google Fonts, so those elements need an internet connection. Contact messages are saved only in localStorage and are not delivered to an inbox. Future work could include a real contact API, image upload, a lightbox viewer, and a content management page.

## Project Description (under 350 characters)

Frame & Form is a responsive image gallery website built with HTML, CSS, and JavaScript. It showcases curated photography with category filters, hover effects, a mobile-friendly layout, and a contact form. It demonstrates page structure, CSS Grid, Flexbox, and interactive web design.

## Conclusion

Frame & Form demonstrates how core HTML and CSS skills can create a polished, responsive visual website. The project is easy to run locally and provides a foundation for learning gallery layouts, styling, and basic JavaScript interactions.
